TALOAR

TALOAR Your One Stop

Reliable Partner!

Taloor

is a world-leading supplier of flow control products and services, providing a diverse range of fluid control products that has wide applicability to commerce, water service and industry.

The solutions provided by Taloor constitute an important part of the leading plant asset management strategies.

Taloor

combines the latest mechanical technologies and advanced automation systems in its production to ensure our products consistently maintain excellent quality.

Taloor always cares and concerns for our users, which is not just a slogan, but a fundamental aspect ingrained in every decision and action taken by the company.

Taloor

has provided solutions and technical services for multiple projects around the world. We accumulated rich project experiences and helped users save energy, boost efficiency, and improve the environment. Through years of product experience and on-site service, Taloor has built up a good reputation in many industries and has become one of the preferred brands for owners and designers.

* The valves designed and manufactured by Taloar provide ideal and correct solutions in the recommended application fields at the lowest purchasing price and maintenance cost, able to meet and even exceed the specified standards. Our certified standards are developed through years of experienced research and laboratory testing.

BUILDING VALVES

CODE LEGEND

Figure Number System of Gate Valves - Globe Valves - Check Valves - Strainers

Bronze-Brass Valves

Type	Pressure	End	Body
A - Gate Valve (Non-Rising Stem)	0 - 1.6Mpa (235 PSI)	0 - Threaded	3 - Brass
N - Gate Valve (Rising Stem)	1 - 2.0Mpa (300 PSI)	1 - Solder	7 - Bronze
G - Globe Valve	3 - 2.5Mpa (350 PSI)	2 - Grooved	
C - Check Valve	5 - 4.0Mpa (585 PSI)	3 - Flange	
B - Ball Valve			
Y - Strainer			

Figure Number System of Butterfly Valves - Gate Valves - Globe Valves - Ball Valves

Cast iron - Ductile iron Valves

Type	Body	End	Pressure
HB - Butterfly Valve	3 - Stainless Steel	5 - Wafer-Type	1 - 1.0Mpa(150PSI)
SV - Signal Butterfly Valve	5 - Cast Steel	6 - Lug Type	0 - 1.6Mpa(235PSI)
MG - Gate Valve (Metal Seal)	6 - Cast Iron	7 - Flanged Type	2 - 2.0Mpa(300PSI)
FG - Gate Valve (Rubber Disc)	9 - Ductile Iron	8 - Grooved Type	3 - 2.5Mpa(350PSI)
GL - Globe Valve		9 - Threaded Type	
CF - Check Valve			
YR - Strainer			
VT - Vent Valve			
TF - Foot Valve			

*** Code definitions:**

- L Lever	- G Worm Gear Lever	- X Butterfly Double-Disc Check	- P Single-Disc Check Valve
- R Rising Stem	- O Polished Rod	- Y Swing Check Valve	- B Ball Check Valve
- N Non-Rising Stem	- E Elastic Seat Sealing	- V Center-Oriented Silencing	- S Stainless Steel Disc

* The figure number systems above are only for reference. The figure number systems vary with valve categories.

* The valves designed and manufactured by Taloar provide ideal and correct solutions in the recommended application fields at the lowest purchasing price and maintenance cost, able to meet and even exceed the specified standards. Our certified standards are developed through years of experienced research and laboratory testing.

Bronze Gate Valves

PN20/300PSI/Class150

Screw-In Bonnet, Solid Wedge, Non-Rising Stem
BSEN12288, Threaded Ends Comply to BS21 or ANSI 2.1

Hydraulic Pressure Test	
Body	3.0Mpa/30Bar
Seat	2.2Mpa/22Bar

Pressure Ratings	
0.9 Mpa at 180°C	
2.0 Mpa at -20°C-100°C

Installation tip!

Vent valves should be vertically installed on the top of piping devices.

Each TALOAR brass valve has been thoroughly cleaned and degreased and packed separately in the sealed polythene bag.

Iron Gate Valves

PN16/235PSI/Class125

Non-Rising Stem, Solid Wedge, Bronze Seat
 Design to BS5150 and MSS SP-70
 Flange Dimension to EN1092-2, ANSI B16.1 Class 125

Hydraulic Pressure Test	
Body	2.4Mpa/24Bar
Seat	1.76Mpa/17.6Bar

Pressure Ratings	
	1.0 Mpa at 180°C
	1.6 Mpa at -10°C-120°C

MG670-N
2" - 24"

Electric Butterfly Valves

PN16/235PSI/Class125

220V/380V, 360° Indicator, Auto Manual / Electric Switching
 Shell With Cemented Carbide Epoxy Coating, 90° Rotation, IP67
 Wafer Style, Flange Dimension EN1092-2, ANSI B16.1 Class 125

HB950-ET/ RM
 2" - 12"

Sealing Performance	
EPDM	-20°C- 120°C
NBR	-10°C- 80°C
VITON	-20°C- 150°C

Hydraulic Pressure Test	
Body	2.4Mpa/24Bar
Seat	1.76Mpa/17.6Bar

Notes:

1. The torque values are applicable to opening/closing operation of butterfly valves for water or other non-lubricating media.
2. In case the medium is dry compressed air, the torque will be larger. New torque values should be calculated by the factory.
3. When the medium temperature is extremely low, the rubber valve seat will be harden and the valve operating torque will obviously increase.
4. The valve seats mentioned above are sealed with EPDM or NBR rubber. If VITON, silicone rubber and other hard sealing materials are used, valve opening/closing resistance will increase. Hence, new torque values should be calculated by the factory.
5. Torque values in the table are actual operating torque values for butterfly valves. It is recommended to increase by at least 20% as a safety factor when electric or pneumatic controllers are used.
6. TALOAR butterfly valves with resilient seats are opened/closed to control the flow by lever. For 2" -6" butterfly valves, lever operator under 150PSI, 235PSI or 285PSI. For butterfly valves in size of 8" or above, the operating torque and counter-acting force generated inside valves may exceed their respective limits. In this case gear operator is suggested for safety.

TALOAR Electric Control Solution

Product Performance:

- 90° rotary switch for throttle control in the butterfly valves or the ball valves.
- ON/OFF type and regulating type control for selection, with an external handwheel operator.
- Torque: 13 Nm-5,000 Nm.
- 360° angle of view, to clearly observe the stroke of the electric actuator.
- Safe and automatic switching between manual and automatic modes, regardless of power-on or power-off state, without the help of the clutch.
- An independent IP68 terminal box, no need to open the upper cover of the actuator.
- ISO5211 mounting interface, with square hole, keyway or other spline sleeve provided for easy exchange.
- Meeting AC 110~120 V/AC 220 V~240 V/AC 380~440 V & AC/DC 24 V power supply standards.
- Hard aluminum alloy shell with oxidation-treated and polyester powder coating: light and compact.
- Shell with enclosed-seal, highly applicable and reliable to be used for outdoors or underwater applications.
- In case of over torque, the temperature control switch for the motor will cut off the power supply automatically to protect the motor.
- A combination of an internal gear and a planetary gear, worm gear lever for manual transmission, with self-locking function.

* The actuators have both manual and electric control functions and are equipped with handwheel operators. ET for ON/OFF control; RM for regulating control.

* Dimension G is non-fixed dimension, and can be adjusted to match valve dimensions.

* Dimensions I and J meet ISO5211 flange standard, can match valve dimensions.

Electric Control Solution

* ET for ON/OFF control; RM for regulating control.

* Rated torque: 75% of maximum torque.

* On/off time of 60 Hz actuator: 5/6 of on/off time of 54 Hz actuator; maximum output torque: ditto.

Shell	IP67 (factory standard), IP68NEMA4/4X6/6P, 72h at 15 m underwater
Power Supply of Motor	AC 110~120 V/AC 220 V~240 V/AC 380~440 V & AC/DC 24 V, 50/60 Hz
Efficient Motor	Rated working time: > 30 min, energy consumption reduced by over 30%, protection grade: Grade F
Over-Temperature Control	The motor is equipped with the temperature control switch which works to power the motor off automatically to protect the motor in case of excessive torque.
Control Signal	4-20 mA/2-10 V/0-10 V input/output
Emergency Gear	Automatic switching between manual and electric operation, without the help of the clutch
Switch Indicator	PoHS-based plastic 3D indicator with high strength and resistance to sunlight, enabling view of switch stroke at 360°
Sealed Structure	The shell and body are with enclosed-seal, highly applicable to use outdoors or underwater
Stroke	90° stroke
Interchangeable Splines	Square holes and keyways with different dimensions for connection available
Self-Lock Device	A combination of an internal gear and a planetary gear, worm gear lever for manual transmission, with self-locking function
Terminal Box	An independent terminal box, with no need to open the shell of the actuator
Work Environment	Free from highly corrosive, flammable and explosive media
Ambient Temperature	-25°C~+70°C
Relative Humidity	90% (25°C)
Material	Hard aluminum alloy
Outer Coating	Dry powder, epoxy polyester

* Electric actuators are all equipped with damp-proof resistors to prevent moisture condensation inside shells.

* Protection grade for motors: Grade F (standard); Grade H (optional)

Valve Installation Tips

Before installing valves, please read the following installation instructions to avoid damage to valves and ensure that the valves can perform perfectly.

1. Threaded Connection

1. Grit, dirt and foreign particles in pipes may impair the operating efficiency of valves and damage their key parts seriously. Hence, it is required to clean pipes thoroughly with air or steam.
2. When threading pipes, measure the dimension and length of pipe threads to avoid jamming pipes against valve seats and discs. Clean threaded ends thoroughly to remove harmful steel or iron deposits. For firmer welding, PTFE tapes or pipe adhesives may be used. However only small amount of pipe adhesive is allowed on pipe threads. As for valve thread, no pipe adhesive is allowed. Stop pipe adhesives from flowing into valves to avoid damage to discs and seats.
3. Before installation cut off fluid that flows through valves to ensure valves function normally. Close valves completely before installation. Apply wrenches to hexagon bolt heads close to pipes and guard against possible deformation. Brace support the pipelines after valve installation as sagging pipes may deform valves and cause valve failure.

2. Flanged Connection

Please follow the steps below to ensure proper flanged connection. Clean connections carefully; mount two or three bolts loosely on the seat; insert gaskets into connections carefully and retain the gaskets at proper position with the help of bolts on the seat; screw bolts in a cross-over manner to eliminate concentrated stress. After service for a certain time, check all bolts and tighten them if necessary.

Table of Flange Dimensions for EN1092 Butterfly Valves

How to Order

To Whom It May Concern :

As suggested, please have a good understanding of the technical features of our products before placing orders so as to purchase proper products. Please provide the following product information when ordering:

- Valve type, material, end type, dimensions and quantity
- Fluid media, temperature and maximum working pressure
- Materials of seals, discs and valve shafts inside body
- Operating modes of valves
- Requirements for product package, transportation and delivery date
- Other special requirements

Alternatively, please feel free to browse products at www.taloarvalve.com For special specifications not covered in the brochure, please consult Taloar's representative office.

Notes:

* Taloar will bear no liability for any consequences arising out of users' failure to select proper products or to provide accurate product application information.

* In order to protect your legitimate rights and interests, please purchase our products through authorized dealers.

Material Performance of Rubber Seats:

Material	Temperature Range °C	Notes
NBR	- 23°C~82°C	NBR has good ductility and resistance to wearing and hydrocarbons. It is usually applicable to media such as water, vacuum gas, acid, salt, alkali, oil and glycol, but it should not be used for media such as acetone, ketone, nitrate and fluorinated hydrocarbon.
EPDM	- 40°C~135°C	EPDM is a kind of commonly-used favorable synthetic rubber. It is applicable to media such as cold/hot water, beverages, dairy products, ketone, alcohol, nitrate ester and glycerin, but it should not be used for media such as hydrocarbon-based oil, inorganic substance and solvent.
VITON	- 29°C~205°C	VITON refers to fluorinated hydrocarbon rubber that comes from good hydrocarbon-resistant oil, oily gas and other petroleum products. It is applicable to water, oil, air and acid media, but it should not be used for such media as steam, hot water above 150°C and concentrated alkaline.
MQ	- 40°C~180°C	MQ has good resistance to high/low temperature and stable chemical properties. It is widely applied in strong acid, weak base and food industries.
PTFE	- 10°C~200°C	PTFE has stable chemical properties, outstanding non-viscidty on the surface, satisfactory lubricity and good resistance to aging. It is widely used for strong acid, strong base, strong oxidant and other corrosive media.

Common Codes:

BB	Bolted Bonnet	IN	Inch	SE	Screwed (Threaded) End
BW	Butt Welding	IN LB	Inch-pound	SJ	Solder Joint
BR	Bronze	IBBM	Iron Body Bronze Mounted	SS	Stainless Steel
B/M	Bill of Material	IPS	Iron Pipe Size	STL	Stellite
CI	Cast Iron	MAX	Maximum	SWP	Steam Working Pressure
CS	Cast Steel	MIN	Minimum	STD	Standard
CWP	Cold Working Pressure	NPT	National Pipe Thread	SB	Screw Bonnet
CV	Check Valve	NRS	Non-Rising Stem	UB	Union Bonnet
D	Dual-disc	OD	Outer Diameter	VAC	Vacuum
FLG	Flanged End	OS&Y	Outside Screw & Yoke	WWP	Water Working Pressure
FF	Flat Face	PSI	Pounds Per Square Inch	WB	Welded Bonnet
°F	Fahrenheit	RF	Raised Face Flange	WOG	Water, Oil, Gas
FS	Forged Steel	RS	Rising Stem	TEMP	Temperature
